**FINAL EVALUATION OF VERMI-CULTURE TECHNOLOGY  
BIDHUNU BLOCK DISTRICT KANPUR NAGAR  
UTTAR PRADESH**

**EXECUTIVE SUMMARY**

A cluster of ten villages of Bidhunu block of Kanpur-Nagar District of U.P. were selected under the project vermi-culture technology by the Society for Integrated Sustainable Development, Yashoda Nagar, Kanpur (NGO). A total amount of Rs.4,16,100/- were sanctioned by the CAPART and Rs.10,405/- were contributed by the Project Implementing Agency (PIA). The project has been completed successfully and all the amount of Rs.4,26,505/- has been utilized properly.

The beneficiaries have been involved since project was conceived. The people of the target area have participated in the programme enthusiastically after a bit reluctance. There is an increasing awareness among the community regarding the adverse consequences of chemical fertilizer and pesticides. It has been found, besides target groups, village pradhans have been very co-operative and expressed there keen interest to more with new techniques of agricultural practices.

The project has been implemented in the most successful way for the improving the soil fertility and productivity of the soil with toxin free method of cultivation of commercial conventional crops. The overall performance of the organisation is found satisfactory and also found a great scope for the replication of this vermi-culture technology programme in other blocks and villages of the Kanpur-district.

**FINAL EVALUATION OF VERMI-CULTURE TECHNOLOGY  
BIDHUNU BLOCK DISTRICT KANPUR NAGAR  
UTTAR PRADESH**

A cluster of ten villages of Bidhunu block of Kanpur-nagar, namely (1) Kharagpur (2) Nagwan (3) Ghuruwakheda (4) Gulabpur (5) Katonghar (6) Parsouli (7) Nayapurwa (8) Tulsipur (9) Palnhapur and (10) Madaiya were selected under the project vermi-culture technology by the Society for Integrated Sustainable Development, a non-governmental Organization (NGO) of Kanpur. The total cost of the project was Rs.4,161,00/- (Rs. Four Lakh Sixteen Thousand and One Hundred Only), which was sanctioned by the CAPART and released in the two instalments as an assistance, to perform the project in the ten villages of Bidhunu block of Kanpur district. A sum of Rs. 10,405/- (Rs.Ten Thousand Four Hundred and five only) were contributed by the executing organization, during the two phases of the project. In first phase, organization contributed Rs.7,140/- (Rs. Seven Thousand One Hundred Forty only) and in second phase of the project, organization contributed Rs.3,265/- (Rs. Three thousand two hundred sixty five only). Therefore, it has been found, that after the completion of the project a total sum of Rs.4,26,505/- has been spent on this project. Except CAPART assistance and Organization contribution, no other amount has been generated from any other source like-Bank Loan, Govt. subsidies, contribution from beneficiaries etc., to perform vermi-culture project in the area.

The stipulated objectives of the project have been achieved. 100 beneficiaries have been selected from 10 villages of Bidhunu block of Kanpur-Nagar to trained them in vermi-composed technology. 200 vermi-pits have been constructed @ 2jpits for each beneficiary. So the target of 200 vermi-pits have been achieved by the Organization. The selection of beneficiaries were made according to the norms. Out of 100 beneficiaries 43 belong to schedule caste, 54 belong to OBC and 03 belong to general cast. All these beneficiaries are small and marginal farmers of the concerning villages. It has been informed by the project implementing Agency (PIA) that the beneficiaries have been involved since project was conceived. It has also been informed that the people of the target area have participated in the programme with high enthusiasm after initial reluctance. This fact has been observed by making a field visit in the area and has found current after making an interview with some of the beneficiaries of the

vermi-culture programme. Evaluator met with 17 beneficiaries of vermi-culture programme of programme of different villages of Bidhunu block of the district. The name of these beneficiaries are (1) Shivpal Rajput, Cast OBC, Gram Pradhan of Parsouli (2) Radhey Shyam, village Parsouli (3) Kallu, S.C. village Kharakpur (4) Ram Jeevan, village Karakpur (5) Lallan and (6) DeshRaj, OBC of Nayapurva (7) PrathviRaj OBC of Gulabpur, (8) Suraj Bali, S.C. (Pradhan of Nagwar) (9) Rajendra, OBC of Nagwar (10) Ram Swaroop, S.C. (11) Ram Deen, S.C. of Tulisiapur (12) SurajBali of Gulabpur, OBC (13) Ram Kumar, OBC (14) Raj Kumar, S.C. of Mareia (15) Chhote S.C. of Ghurau Kheda (16) Chandra Pal, OBC of Palampur village and (17) Vinod Pal, OBC of Katonghar village.

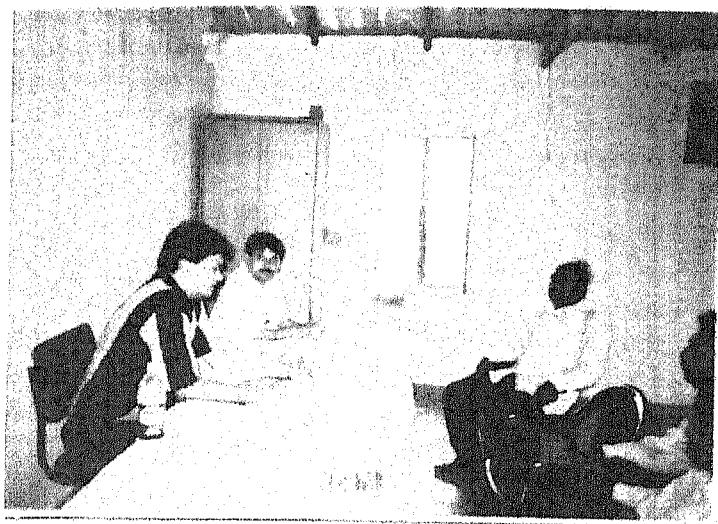

All these beneficiaries in their interview said to evaluator that they were not agreed with the organization in the start of vermi-compost programme but gradually they all could be able to understand the concepts and the main objective of the vermi-compost technology and started bringing it in practice in order to minimise the chemical fertilizers in agricultural practices. After a bit opposition they have started to understand the overall strategy to bring down the cost inputs in agricultural current practices and evolve the strategy to improve the agricultural productivity. It has come to know that one of the beneficiary and pradhan of parsouli village was very much against regarding this programme at its initial stages. But he told to the evaluator at the time of interview, that he become the fan of this programme, when he used the vermi-composted in his farm and found a big positive effect on the productivity. Therefore, it has been found that the beneficiaries of the vermi-compost programme are fully satisfied with the project in their areas. A list of 100 beneficiaries has been given in the annexure 1 and 2. These 100 beneficiaries were selected in two phases of the project. In first phase from 1.8.2004 to 31.1.2005, 50 beneficiaries were selected and in second phase of the project from 1.9.2005 to 28.2.2006, again 50 beneficiaries were selected (pl. see in Anxx. 1&2).

It has been informed by the President of the society for Integrated Sustainable Development, Mr. K.P. Bikal , that, at the initial stage of the project most of the villagers including one or two village pradhans were not co-operative with them. They were not having faith in vermi-compost but after organizing few workshops on vermi-culture programme. They were able to understand the programme and started co-operating with society members. To find out few facts regarding the programme completed by

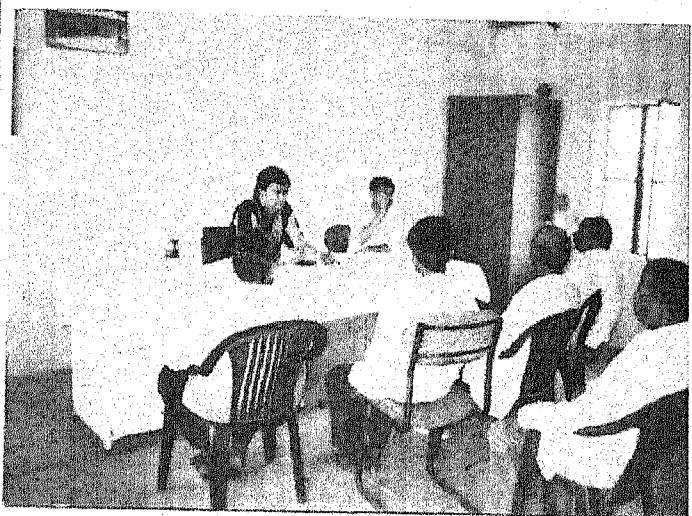

the organisation a meeting with the members of the society (photoplate-1) and Gram Pradhan (photoplate-2) were organised at the working site of the project. Evaluator also met with the beneficiaries of the vermi-compost programme on the site (photoplate-3). Regarding the vermi-culture technology programme the slogans have been painted on the wall at the right place in the villages to make people aware regarding the programme (photoplate-4). For the publicity of the vermi-compost, society has published pamphlets giving the information regarding the benefits of the vermi-compost in agriculture. No photography, video-recording have been done by the society. Only the pamphlets, having the detailed information regarding the vermi-compost have been published and distributed in all the ten selected villages of the Bidhunu block of Kanpur district. The camps regarding the vermi-compost have been organised by the society and all the beneficiaries were the participant of the camps. Experts were invited to deliver the lecturer on the subject.

At the time of field visit of the evaluator it has been found, that the society for integrated sustainable development has developed few vermi-compost pits at Bidhunu block and people were maintaining these pits and developing vermi-compost (photoplate-5). In all the ten villages of Bidhunu block of Kanpur district, beneficiaries are maintaining the vermi-compost pits and producing compost fertilizer in these pits. The vermi-compost pits have became the sources of their income as well as for the good chemical free fertilizer of their own farms (photoplate-6). It has been found that the fertility of the land has been improved a lot by using compost fertilizer regularly. The paddy crop was found good in a farm where this fertilizer has been used. It has also been found that the water holding capacity of the farm has been improved a lot due to the use of this vermi-compost fertilizer. It can be clearly seen in photoplate-7.

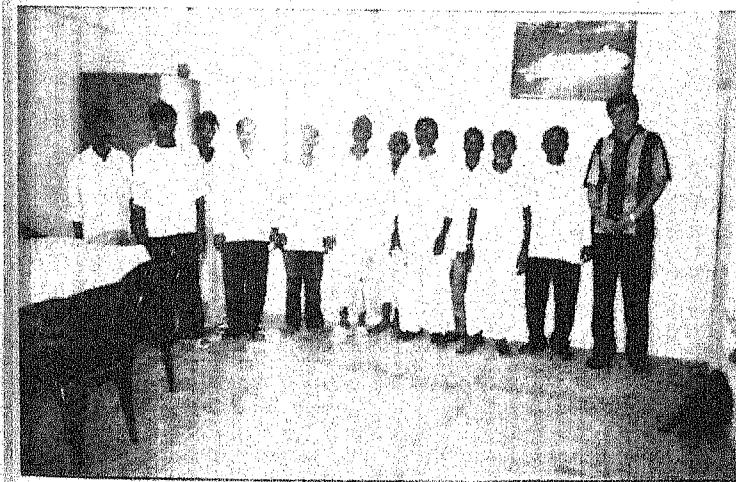

It has been informed by the society as well as the beneficiaries of the project the overall impact of the project is remarkably very good. The production and productivity of the land has been improved a lot. Also the fertilizer the fertilizer produced through vermi-culture technology is environmental friendly, which increases the productivity of the soil and good quality of its produce. At the time of field survey, it has been found that the impact of the project was highly positive. The project area become green belt due to the vermi-compost technology (photoplate-8).

As far as sources of finances is concern the maximum amount of the project Rs.4,16,100.00 has been sanctioned by the CAPART and has been released to the society of Integrated Sustainable Development, Kanpur in the two installment of Rs.2,08,050/- each. A total amount of Rs.10,405/- were contributed by the organization itself. No other money has been develop or contributed from any other sources like Bank loan, Govt. subsidies, Contribution from beneficiaries etc. (Table-1). So a total amount of Rs.4,26,505/- were develop to perform this project in 10 villages of Bidhunu block.

Table-1 Source of Financing for the Project Vermi-Compost

Sl.	Source	1.8.2004 -31.01.2005	1.9.2005 t-28.02.2006	Total

5.	Admini Expenses	8,313.00	11,969.00	20,282.00
		2,11,315.00	2,15,190.00	4,26,505.00

Source : Society for Integrated Sustainable Development, Kanpur

It has been found that the project has been successfully implemented in the Bidhunu block of Kanpur district. The desire objectives have been achieved by the organization. There was no provision for the creation of assets in the project. The follow up of the project technology is required in the area and few more blocks of the district should be selected by the organisation and must be treated. The overall performance of the organisation is found satisfactory and has a great scope for the replications of this vermi-culture technology programme in the other blocks and villages of the Kanpur district.
